MICHAEL DATSKOVSKIY
PRIMARY EXAMINER

REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance: The claims 1-15 are allowable over the prior art of record for at least the reason that the prior art fails to teach or suggest a heat dissipating apparatus for an electronic device having an integrated heat spreader, comprising: a base having a lower surface and an upper surface, the lower surface having a contact area to contact the integrated heat spreader when the base is disposed on the electronic device, and the lower surface having a concave area extended to the contact area from an edge of the lower surface of the base.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

2. The Fig. 2 of the present application, admitted by the applicant as a prior art, discloses a heat dissipating apparatus for an electronic device having an integrated heat spreader, comprising: a base having a lower surface and an upper surface, the lower surface having a contact area to contact the integrated heat spreader when the base is disposed on the electronic device, but does not comprise a lower surface having a concave area extended to the contact area from an edge of the lower surface of the base. US Patents by Lin (5,651,688) and Bright et al (5,241,453), and also Japan Patents JP402012953A by Uchida and JP405003235A by Ishikawa each teaches a heat dissipating apparatus for an electronic device having an integrated heat spreader,

Art Unit: 2835

comprising: a base having a lower surface and an upper surface, the lower surface having a contact area to contact the integrated heat spreader when the base is disposed on the electronic device, and the lower surface having a concave area.

However, each of them teach said concave area extended through said contact area from one edge of the lower surface of the heat sink to another, instead of extending to the contact area from an edge of the lower surface of the base.
